

**SOIL AND GROUNDWATER CONTAMINATION
IN THE CZECH REPUBLIC
(HISTORY, MOST POLLUTED SITES, REMEDIATION
TECHNOLOGIES)**

LENKA MCGACHY

The presentation on Soil and Groundwater Contamination in the Czech Republic summarizes basic information about the contamination of the subsurface in the Czech Republic, including the most contaminated sites. Furthermore it focuses on the most common contaminants found in the subsurface and the processes that affect their fate in the environment. Finally the presentation summarizes technologies commonly used for a remediation of both soil and groundwater. The soil and groundwater contamination is related to the actual EU environmental legislation.
